

LUNAR LANDING - HOT AIR BALLOON EDITION

Frej Ramström

The plan is simple - Instead of a rocket, I'll use a hot air balloon to land. The balloon will have a red color with yellow ropes, dark yellow basket. Hopefully it will have flames if it goes up or down. The scenery will have a grass background and either blue sky or a night sky. There will be trees, and perhaps an animal(?) too. If the landing fails, I will try to add an explosive. If not, a message will appear with a success image.
